

WHAT IS LSD?

LSD or “acid”, is manufactured in a laboratory from a fungus that grows on rye grains and is called ergot.

It comes as a white powder, liquid solution and tablet form.

The LSD solution is sometimes injected into blotting paper illustrated with cartoon characters.

WHAT ARE THE EFFECTS?

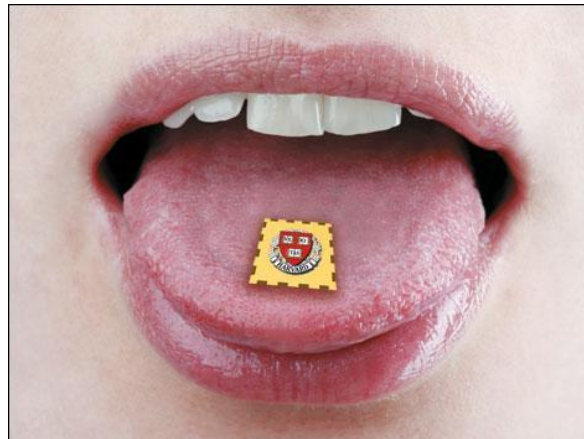

The mind and body is affected once the person has “popped” a cap of acid (known as “tripping”).

This happens within 30-40 minutes of taking LSD, but depends on how much is used.

- Nausea and Vomiting
- Dizziness
- Heart beats faster
- Red eyes
- Trembling
- A rise in blood pressure
- Hyperventilation
- Chills and shakiness

PHYSICAL CHANGES

- One may smell colours and see sound
- One may hallucinate: see and hear things that do not exist, e.g. fixed objects may walk, or take on weird colours, shapes and patterns
- One can experience a “bad trip”, which can last up to 24 hours; with the person feeling an overwhelming sense of euphoria or anxiety, desperation or anger, strong emotions
- However, a bad trip cannot be predicted or prevented; or when it will happen – even if the user has enjoyed “good trips” previously.

WHAT ARE THE AFTER EFFECTS?

- Sometimes, months after having used LSD, the user can re-experience the same feelings and sensations – without having had more of the drug.
- Such “flashbacks” may result suddenly – especially after using other drugs like dagga.
- “Flashbacks” may happen even after having stopped using drugs; e.g. while driving.

IS IT WORTH THE GAMBLE?

Enrich the runners and merchants, become their slave; for once you are hooked you are bankrolling them. And it will **cost** you, of that you can be certain!

And while you may steal from your family, your friends, the public at large; you will not only be on the run from the police and the merchants when you cannot pay; you will cringe in terror as you try to escape the effects, after-effects and the horrors of life. The only problem is that there is no escape!

Is it worth the gamble?

The choice is yours!
